

22 July 2026

IETF 126 BMWG & IPPM (1)

This session is being recorded

Note Well

By participating in the IETF you agree to follow IETF processes and policies. This Note Well is a reminder of some of those policies. For a linked version of this text, please visit www.ietf.org/note-well or use the QR code below.

- IETF participants are expected to behave in a professional manner and extend respect and courtesy to their colleagues at all times (see *RFC 7154: IETF Guidelines for Conduct and IETF Anti-Harassment Policy*). If you have any concerns about behavior, please contact the *Ombudsteam* who have a duty of confidentiality and extensive powers to act, as set out in *RFC 7776: IETF Anti-Harassment Procedures*.
- If you are aware that any IETF contribution (as defined in *RFC 5378: Rights Contributors Provide to the IETF Trust*) is covered by patents or patent applications that are owned or controlled by you, your employer or your sponsor, you must disclose that fact, or not participate in the discussion (see *RFC 8179: Intellectual Property Rights in IETF Technology*).
- For detailed process information consult *RFC 2026: Internet Standards Process* and *RFC 2418: IETF Working Group Guidelines and Procedures* and updates to those.
- The IETF routinely makes public written, audio, video, and photographic records of IETF activities, including your personal information as set out in the *ietf.org Privacy Statement*.

For advice, please talk to Working Group chairs or Area Directors.

Note Really Well

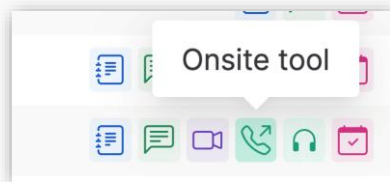

- IETF meetings, virtual meetings, and mailing lists are intended for professional collaboration and networking, as defined in the IETF Guidelines for Conduct (RFC 7154), the IETF Anti-Harassment Policy, and the IETF Anti-Harassment Procedures (RFC 7776). If you have any concerns about observed behavior, please talk to the Ombudsteam, who are available if you need confidentiality to raise concerns confident about harassment or other conduct in the IETF.
- The IETF strives to create and maintain an environment in which people of many different backgrounds and identities are treated with dignity, decency, and respect. Those who participate in the IETF are expected to behave according to professional standards and demonstrate appropriate workplace behavior.
- IETF participants must not engage in harassment while at IETF meetings, virtual meetings, social events, or on mailing lists. Harassment is unwelcome hostile or intimidating behavior—in particular, speech or behavior that is aggressive or intimidates.
- If you believe you have been harassed, notice that someone else is being harassed, or have any other concerns, you are encouraged to raise your concern in confidence with one of the Ombudspersons.

This session is being recorded

IETF 126 Meeting Tips

In-person participants

- Make sure to sign into the session via Datatracker or the QR Code in this session.
- Use Meetecho (usually the "Meetecho lite") client to:
 - join the mic queue
 - participate in shows of hands
- *Keep audio and video off if not using the onsite version.*

Remote participants

- Make sure your audio and video are off unless you are chairing or presenting during a session.
- Use of a headset is strongly recommended.

BMWG charter

- The Benchmarking Methodology Working Group (BMWG) will continue to produce a series of recommendations concerning the **key performance characteristics of internetworking technologies, or benchmarks for network devices, systems, and services**. Taking a view of networking divided into planes, the scope of work includes benchmarks for the management, control, and forwarding planes.
- The set of relevant benchmarks will be developed with input from the community of users (network operators and testing organizations) and from those affected by the benchmarks when they are published (networking and test equipment manufacturers).
- The scope of the BMWG is limited to the characterization of implementations of various internetworking technologies using controlled stimuli in a laboratory environment. Said differently, the BMWG does not attempt to produce benchmarks for live, operational networks.

Full Charter: <https://datatracker.ietf.org/group/bmwg/about/>

IPPM charter

- The IP Performance Measurement (IPPM) Working Group **develops and maintains standard metrics that can be applied to the quality, performance, and reliability of Internet data delivery services and applications running over transport layer protocols (e.g. TCP, UDP) over IP**. It also develops and maintains methodologies and protocols for the measurement of these metrics. These metrics, protocols, and methodologies are designed such that they can be used by network operators, end users, or independent testing groups. Metrics developed by the IPPM WG are intended to provide unbiased quantitative performance measurements.
- The IPPM WG works to foster commonality and comparability of metrics and measurements across IETF protocols at different layers. Its work is limited to metrics and methodologies which are applicable over transport-layer protocols over IP, and does not specify encapsulations required for measurements over non-IP layers.

Full Charter: <https://datatracker.ietf.org/group/ippm/about/>

Notetaker

- We need a volunteer for notetaking.
- <https://notes.ietf.org/notes-ietf-126-bmwg-ippm>

Agenda – Working Group Documents

Time	Length	What	Who
11:30	10m	Welcome, Note Well, Agenda, Status	Chairs
11:40	5m	draft-ietf-ippm-connectivity-monitoring	Ruediger Geib
11:45	5m	draft-ietf-ippm-qoo	Ike Kunze

Agenda – Proposed Work

Time	Length	What	Who
11:50	10m	draft-cxx-ippm-ioamaggr, draft-mbci-ippm-ioam-template-option	Alexander Clemm, Ramon Bister, Severin Dellsperger
12:00	5m	draft-calabria-bmwg-ai-fabric-terminology, draft-calabria-bmwg-ai-fabric-training-bench, draft-calabria-bmwg-ai-fabric-inference-bench	Qin Wu
12:05	5m	draft-yl-bmwg-cats	Kehan Yao, Guanming Zeng

Joint Charter Discussion

Time	Length	What	Who
12:10	20m	Feedback on IPPM/BMWG Joint Charter Proposal	Qin Wu , Chairs

We reserved 20min time at the end of this session where we discuss with Qin Wu together your feedback and comments on the proposed joint charter <https://github.com/ietf-ippm/wg-charter/blob/main/ippm-bmwg-joint.md> and deciding the name of the joint working group.

BMWG Document Updates Since IETF 125

- [draft-ietf-bmwg-sr-bench-meth](#) Submitted to IESG for Publication. Received AD review. Awaiting reviews from RTGDIR and PERFMETRDIR.
- [draft-ietf-bmwg-network-tester-cfg](#) RFC Ed Queue
- [draft-ietf-bmwg-mlrsearch](#) in RFC Ed Queue

IPPM Document Updates Since IETF 125

- [draft-ietf-ippm-connectivity-monitoring-13](#), parked document (**on agenda today**)
- [draft-ietf-ippm-qoo-11](#), RFC Ed Queue, (**on agenda today**)
- [draft-ietf-ippm-hybrid-two-step-06](#), AD review received (**on agenda tomorrow**)
- [draft-ietf-ippm-stamp-ext-hdr-11](#), [draft-ietf-ippm-alt-mark-deployment-07](#) and [draft-ietf-ippm-alt-mark-yang-04](#) in WG last call (**on agenda tomorrow**)
- [draft-ietf-ippm-asymmetrical-pkts-14](#), RFC Ed Queue
- [draft-ietf-ippm-ioam-data-integrity-19](#), IESG Evaluation
- [draft-ietf-ippm-ioam-integrity-yang-08](#), Submitted to IESG for Publication

RFC 7799bis

status-change-ippm-active-passive-methods-03

[RFC 7799](#) is one of the key documents that record IETF best current thinking about the classification of measurement metrics and methods. Also, the document is normatively referenced by other RFCs and cited outside IPPM, including by other SDOs. The classification guidelines set in this RFC are used as a reference to position measurement methods and establish a structured approach to capture measurement method characteristics. Typically, a measurement method is first presented by indicating whether it belongs to Active/Passive/Hybrid category defined in [RFC 7799](#).

The experience so far supports reclassification of [RFC 7799](#) from Informational to BCP in compliance with the definition in Section 5 of [RFC2026](#). This reclassification is also meant to ensure consistent with the recent approval by the IESG of the companion document "Guidelines for Characterizing the Term "OAM"" ([draft-ietf-opsawg-oam-characterization](#)) that will be published as a BCP (currently in the RFC Editor Queue) and which was carefully reviewed to ensure consistency with [RFC 7799](#). Both these documents and "Guidelines for the Use of the "OAM" Acronym in the IETF" ([RFC 6291](#)) will be published under the same BCP: [BCP 161](#).

This reclassification allows to group key guidelines to enable unambiguous, precise, and consistent understanding of OAM mechanisms in the IETF, in particular.

<https://datatracker.ietf.org/doc/status-change-ippm-active-passive-methods/>

- RFC 7799 is well established, widely used, referenced, and has been considered for being [BCP 161](#) (Best Common Practice) together with [RFC 6291](#) and [RFC 10014](#).
- At the IESG last call, the proposal [received the feedback](#) that since it is already 10years old, a refresh would be appreciated. Giuseppe has taken the initiative and published [draft-fioccola-ippm-rfc7799bis](#) (many thanks!).
- Please review and comment on the mailing list on the following thread: <https://mailarchive.ietf.org/arch/msg/ippm/mLhjuga9b-gGYs91mSmfdqA1VP8/>.
- We are looking forward to initiate working group adoption call.
